PRESENTATION OF THE COMPANY

NOVOL

MATERIALS FOR CAR REFINISHING

SOLUTIONS FOR INDUSTRY

SELF-LEVELLING FLOORS

PRODUCTS FOR WOOD FLOORING

SOLUTIONS FOR STONEWORK

SOLUTIONS FOR BOATBUILDING

We offer a wide range of specialist
repair and assembly materials
designated for various trades:
products for the renovation of lacquer coatings,
materials for the assembly and care of wooden floors,
self-levelling sports and industry floor systems,
materials for boatbuilding and stonework.

Customer's satisfaction with the results of work achieved thanks to NOVOL products is our highest aim. That is why the quality of the products is our priority. We introduced
the Quality Management System ISO 9001:2000,
which guarantees that the products you receive
are equally effective and efficient.

We also value good relations with our customers:
our regional representatives are ready
to give binding information about our products
and suggest effective usages of these products.
The assistance may also be extended
to specialist training that is organised
in the NOVOL Training Centre.

In accordance with global tendencies for environmental protection,
we have entered the "Responsibility and Concern" programme.
it was a step towards the introduction of the Environmental
Management System ISO 14001: 2005, thanks to which
we have managed to carry out a number of actions aimed
at reducing the emission of gases harmful
to the environment and improving environmental conditions.

Our materials are distinguished by their easy and quick application and their effectiveness, which is directly connected with **cost and time savings.**
No matter if a person is **a painter, a boat builder,**
if he or she installs wooden floors or cuts stone;
they all can count on a **high productivity level** of the products with the NOVOL logo on them.

VOC OK

PROFESSIONAL

A product line
for the complex renovation
of car lacquer coats.

SPECTRAL

Lacquer mixing systems,
with a range of supplementary materials.

INDUSTRIAL

An offer designated for the production and restoration of vehicles.

NOVOFLOOR

Self-levelling sports and industrial floor systems for indoor and outdoor usage.

SUPRA

A system of products designated for wooden floor laying, protection and care.

SOLIDO

A range of adhesives and fillers designated for stonework.

NAUTIC

Materials designated for boat building and repairing.

The company's research and development laboratory
is constantly updating the production recipes, thanks to which,
NOVOL materials meet the highest requirements
of professional customers.

The entire production process is monitored
by the production laboratory, which checks
whether the products that come off the production line comply
with the established quality standards.
These should assure you that our products
will never let you down.

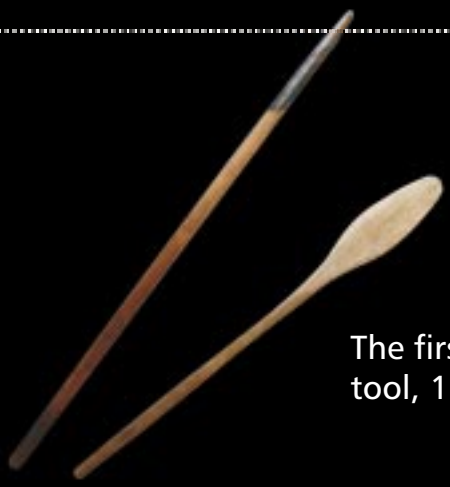

The NOVOL training centre is the place where specialist workshops on the usage of our products take place. Experienced instructors discuss various issues concerning the usage of NOVOL products by applying practical tasks, supported by theoretical knowledge. With modern equipment and qualified personnel, we are able to present a wide range of our product applications. The knowledge that thousands of people gain at our courses every year pays off in their daily work.

The company was established in a small, 90 square metre workshop. At that time, a limited assortment of products made with the use of hand tools was enough to satisfy the local market needs.

The first work tool, 1978.

NOVOL

AFTER 2004

NOVOL

Currently, after over 30 years of development,
the products with the NOVOL logo on them are delivered
o customers in West and East Europe, Asia, Africa
and the Middle East.
Our production halls occupy an area of 7000 square metres.
we also have trade partners in Germany, Russia,
Ukraine and Azerbaijan.

Our work strategy is effective: for years we have been the winners of the "Fair Play Company" programme. we are pleased that our long-standing care for good relationships with our customers and employees has been appreciated by independent organisations.

We are equally proud that we received a special award in the "Entrepreneur of the Year" competition, organised by Ernst & Young. We won recognition for the exceptional social responsibility and for the understanding and help given to the handicapped, enabling these people to find sense in life.

Together with other signatories of the "Responsibility and Concern" programme, we actively participate in various ecological and educational programmes. One of its forms is "A tree for a bottle" campaign, the aim of which is to propagate the ideas of environmental protection among children.

The construction of a thermal oxidiser is one of the most important of ecological investments. Out of concern for the environment, there was created an advanced system which limits the emission of volatile organic compounds and enables the obtaining of pro-ecological thermal waste energy derived from industrial combustion processes.

The destroyed palace, bought in 1998, was fully reconstructed and is now considered as a unique monument. Worth noticing is the park complex, the former magnificence of which could be revitalised thanks to the restoration works.
